

A key assessment tool *for measurement-based care*

Lucet's proprietary Behavioral Health Index (BHI®) is a comprehensive, clinically validated assessment tool that enables providers and health plans to take a holistic approach to care delivery.

Applicable across acuity spectrum

Based on a community-treated population

Clinically validated

Registered with the
Joint Commission and supported
by 15M+ assessments

Real-time outcomes

Continuous measurement
enables early intervention

How It Works

Clinical Foundation

Lucet's BHI has been refined over 25+ years to reliably and responsively evaluate a patient's overall clinical acuity. Holistic and transdiagnostic, the BHI leverages validated symptom scales (PHQ-2 and GAD-2) alongside subjective well-being and global functioning to understand a patient's acuity and inform interventions and treatment needs.

Continuous Assessment

Patients receive a new BHI score each time they complete an assessment. This is paired with an expected treatment response developed by the Lucet research team which creates a data curve for patients with a similar clinical profile, enabling timely and effective early intervention and treatment success.

Outcomes at Scale

Patient change is severity-adjusted and generated at the patient and provider level, providing a big-picture snapshot of overall patient outcomes.

Better inform patient *treatment and outcomes*

Lucet's Navigate & Connect matches member needs to provider capacity in real time, streamlining access and speed to high-quality providers and clinically appropriate care—plus driving better patient outcomes. The BHI fuels effective provider matching via Navigate & Connect, identifying patient acuity and risk during initial screening and providing the backbone of Lucet's measurement-based care model throughout the care journey.

◆ All-in-One Provider Tool

The BHI is a tool to help clinicians make more informed decisions, tailor interventions to individual needs, and optimize outcomes—paving the way to value-based care.

◆ Empowered Members in Treatment

By accounting for actual patient experience and functioning, the BHI supports the patient journey and provides a launching pad to discuss overall health, enhancing the success of the therapeutic process.

◆ Population Health Tracking

By providing a universal screening tool, the BHI allows health plans to prioritize acute populations, ensuring that high-acuity patients receive the additional clinical support they need.

25+
years of
